

### Siemens SPC (Single Panel Control)

Siemens SPC Integrated alarm and Access control panel offers protection for commercial and industrial premises. Many companies do not consider the full implications of a break in until it's too late.

Businesses are targets of crime costing companies millions of pounds every year. Many companies only consider the cost of physical losses; losses incurred from unfulfilled orders, lost production and down time can be just or more costly to any business.

To add to this, the risk of fatalities and injuries to staff and visitors makes it essential that an employer takes responsibility for your site security requirements. Paramount offer secure solutions from the Siemens SPC (Siemens panel control) for both Intruder detection and access control. Our integrated central station monitoring platform offers innovative technology for alarm monitoring, remote control and remote support from our custom built platform.

Approved by the National Security Inspectorate (NSI/NACOSS) as an Integrated Systems and ISO 9002 quality assured ensures we meet the demands of the most discerning customer. The SPC intruder panel range has been designed to accept industry standard intrusion detection devices, and offer seamless integration with access control fitted on doors, automatic gates and barriers. When used in conjunction with the HID Proxpoint proximity card readers, the SPC range provides a reliable, sophisticated and user friendly security solution.

Paramount offer the complete range of security systems which include system manufacturing, when combined with our in house monitoring and remote support offers our clients and end users and excellent and efficient service. Our software development team can also provide solutions for Integration of multiple security databases, combining multiple makes of security system into one solution.

Choosing a monitored Paramount intruder detection system connects your premises to our Central Station 24 hrs a day.

We respond to activations from all kinds of signals including intruder, fire, lone worker, and technical alarms such as a freezer failing or a basement flooding.

**Response** to alarm activations is a crucial decision, as without ensuring the appropriate response, your system will fall at the first hurdle. Response types include, Police, Fire, Security Officers, Caretakers and Key holders.
