

Manual Traffic Barrier Range

The Paramount manually operated rising Arm Barriers is the ideal cost-effective solution to controlling or restricting access onto security-patrolled car parks or sites with low traffic flow. The barrier is counter-balanced to allow a user to easily operate it.

The construction of the barrier is from a heavy-duty steel section, which handles an aluminum pole with ease and precision. Heavy-duty bearing blocks allow quick and silent travel making the manual barrier an ideal cost effective solution for sites requiring an aesthetic solution.

The barrier is supplied as standard, with locking options in either the down or upright position and can also be used in conjunction with our lockable tip support, increasing security.

Our range is available in widths from 3.0 to 9.0m or 18m when used as a bi- parting pair.
