

### Advanced CCTV

Our advanced CCTV solutions are available for medium to large sites offering for between one and 200 cameras.

Our experienced engineers can provide a working solution that will meet your requirements and provide you with live and recorded images with or without sound 24hrs a day 7 days a week.

Our existing CCTV installations cover all types of property from low risk shops and retail premises to high risk locations such as Government installations and strategic sites.

Most Paramount CCTV solutions are based around a CCTV matrix and/or digital recorder to provide the control room, reception or monitoring location with easy to use equipment.

All of our ranges are compatible with off site monitoring to our own central monitoring station, or to a private monitoring station of your chase.

Paramount's design team will gladly design a solution to meet your individual requirements, or alternatively we can install to the clients or consultants specifications.

As an independent security provider we offer solutions from all major manufacturers and choose the right solution for each client on a site by site basis.

All our CCTV solutions can be fully integrated with our Intruder alarms, Access control systems, and perimeter electronic detection solutions.

**Advanced CCTV**

Paramount offer the complete security surveillance solution, providing the end client with full training on all aspects of the CCTV systems fitted, including advice on how to comply with the Data protection act.

We offer a wide range of digital recording solutions, and install any specified industry standard digital recorder. Many of our installations are based around the Adpro range of products, offering exceptional on site recording, with an option to link your site to our central station. This allows remote viewing of single or multiple sites.

### Advanced CCTV

**ADPRO** is the video security platform of the future. It features-

- Quick Access Remote Multi-Site Management delivering instant video access over a variety of communication links, including PSTN, ISDN, GSM, ADSL or other high speed networks.
- Image Water-Marking providing tamper-proof images for use as admissible evidence.
- Long Duration Recording enabling storage of typically six times more video images than most other products on the market.
- Simultaneous Access by Multiple Users allowing recorded images to be accessed and simultaneously viewed from multiple locations.
- Retail POS/ATM Interface enabling quick viewing of fraudulent activities through synchronization of transactions with video footage.
- Compliance to British Security Standard BS8418 ensuring best practice installation and monitoring.
- Total System Integrity giving a secondary back-up channel if a primary signal fails and automatic error notification about power failure etc.
- Non Windows based, more reliable than PC based recorders.
- Super fast object searching when viewing recordings
- Alarms and Outputs, offering remote Gate and Barrier control
- Audio loudspeakers for on site warnings
- Two way audio from intercom heads or help points
