

Small Schemes CCTV

Our small scheme CCTV solutions are available to suit smaller applications offering systems for between one and 8 cameras.

Our experienced engineers can provide a working solution that will meet your requirements and provide you with live and recorded images with or without sound 24hrs a day 7 days a week.

Our existing CCTV installations cover all types of property from low risk shops and retail premises to high risk locations such as Government installations and Strategic sites.

Most paramount CCTV solutions are based around a CCTV matrix and/or a Digital recorder to provide the control room, reception or monitoring location with easy to use equipment.

All of our ranges are compatible with off site monitoring to our control room, or to a private control of your choice.

Our smaller systems are also compatible with ATM machines and most cash registers to capture text as well as video and sound.

Paramount's design team will gladly design a solution to meet your individual requirements, or alternatively we can install to the clients or consultants specification.

As in independent security provider we offer solutions from all major manufacturers and choose the right solution for each client on a site by site basis.
