

## PC Alarm Systems and Graphical Monitoring for Control Rooms

Paramount can offer our Utility clients, and large university and education complexes and large hospitals with a bespoke designed security management system (SMS). The sms solution provides a control room operator with graphical map interfaces showing the locations of all types of security detection deployed around your premises.

The SMS security solution is available as a fully scalable system, Paramount Offer solutions from a number of manufacturers and we offer our own in house CAD design facility to produce all types of site maps and graphics to suit each circumstance.

Control solutions can accommodate intruder alarms, fire alarms, CCTV, Lone working systems and even perimeter alarms from fencing.

The SMS offers a cost effective solution to allow a single operator to control and manage hundreds of detection zones, send cameras immediately to view a suspected problem location, and log all events to an audit trail as they unfold.
