

Intercom systems

Our range of intercom systems are designed for any visitor orientated application on doors, gates or barriers. We can offer a desk console capable of handling from 1 to 10 call stations, with larger systems available upon request.

The desk console is available in two versions depending on the application; the standard version is designed for offices and warehouses. The amplified version is for any application where a noisy background exists. Lorry parks are a typical use for this unit.

High quality audio is transmitted in a simplex manor, when a call station is selected on the desk controller, you can automatically hear the visitor without the visitor hearing you. This feature helps to prevent office conversations being overheard. To speak to the visitor you push and hold the talk key to communicate with the visitor.

The external call units are manufactured from high grade stainless steel, and are a surface mounted unit making them ideal for installation on our access control posts or onto a brick surface.
