

Data Sheet EPM

Mini Entry Phone

The EL25 is beautifully engineered for private residences and gated estates, yet fully adaptable for use in apartment buildings, offices, small industrial estates and commercial applications.

Unmatched in its class, the EL25 is designed to easily manage between 1 and 5 occupants with a total of 250 access codes. And unlike other systems, the EL25 can be purchased as a standard unit without any unnecessary options.

The EL25 is the ideal solution for controlling access through doors and gates, with its ability to call landline, mobile phones and internal exchanges. Remote release of the door and gate from the telephone handset is a standard feature.

The EL 25 can be programmed on or off site using the Parasys Programming software.

STANDARD FEATURES
