

Pedestrian Swing Gates

Paramount [Pedestrian Gates](#) are a cost effective solution for controlling pedestrian access.

The gate leaf is suitable for a wide range of applications, including schools, colleges, factories, and industrial applications.

There are two categories of Pedestrian Gate available, Manual and Semi-automatic.

Manual Range

Our Manual range is available in widths from 1.0 to 1.5metres and heights from 1.0 to 3.0metres. The gate leaf can be clad with Palisade, Vertical Bar or most mesh systems. The gate is held in the secure position by an electro- magnetic lock with a holding force of 600lbs.

The manual range relies on the person using the gate to close it behind them, as no self closing device is included.

Semi –Automatic

The Semi-automatic Pedestrian Gate uses an overhead hydraulic closer and is available in the same widths as the manual range. The minimum height is 2.1m supplied assembled in its frame. The semi-automatic gate will close automatically after a pedestrian has passed through. The gate is held in the secure position by an electro-magnetic lock with a holding force of 600lbs.
